THE ANNUAL FUND FOR UAMS

HUB of HEALTH
Make your connection.

UNIVERSITY OF ARKANSAS FOR MEDICAL SCIENCES
The Mission of UAMS

is to improve the health, health care and well-being of Arkansans and of others in the region, nation and the world by:

- educating current and future health professionals and the public
- providing high-quality, innovative health care as well as specialty expertise not routinely available in community settings
- advancing knowledge in areas of health and disease through research
- translating discoveries into improvements in health and health care
It is with your help that we are able to navigate to greater achievements and blaze new trails for exceptional care. Your gifts allow us to know no bounds. Your generosity ensures that we have the fuel for the journey before us. At any gift level, you have an impact on our ability to lead toward better health and health care for our state, our region, our nation and beyond. UAMS is a philanthropic destination worthy of your support. You can have confidence in knowing that 100 percent of your gifts stay in Arkansas.

I invite you to read on and learn about the amazing things that are happening daily here at UAMS. With our multidisciplinary approach and forward-looking innovations, we remain at the forefront, leading the way to a healthier future. Be assured that we are a steady partner as health care undergoes a metamorphosis of sorts in this rapidly changing health care landscape.

Daniel W. Rahn, M.D.
UAMS Chancellor
We focus on population health, which is the health of all Arkansans. We are devoted to improving the health of individuals, families and communities across Arkansas through education, research and service. I think you will be pleased with the outcomes of our work. Your support enables us to train a workforce and conduct research that results in disease prevention and a better quality of life for everyone.

**Martha Phillips, Ph.D.**

"Teaching and research are important to me, but gathering and framing information to help communities and policy makers make informed decisions is my passion.

That passion helped spur the idea for a website – www.uams.edu/phacs - that compiles the abundance of available public health-related information in one place. It makes connecting to community health information easy for Arkansans.

Community organizations and ordinary citizens can use the information to improve the health of their people. The website also holds a wealth of information for researchers and policy makers. For example, you can go to the website and find that 31.3 percent of women over 40 in Crittenden County have not had a mammogram in the last two years. Mammograms help save lives by detecting breast cancer early, and it is recommended that women over the age of 40 be screened regularly. That pinpoints a direct opportunity for improvement.

Of course, that’s just one example of the type of information available. Users can search indicators related to demographics, social environment, access to health care, behavior risks and preventive care in addition to health outcomes and mortality.

I encourage everyone to get to know the public health challenges that are facing your particular community."

Martha Phillips, Ph.D.
Assistant Professor
Little Rock, Arkansas

Nikiya Simpson, M.B.A.
PHACs Project Manager
Little Rock, Arkansas

my connections: I’m an assistant professor in the College of Public Health. My husband works at UAMS. Three of our neighbors also work at UAMS. My family physician graduated from UAMS.
The College leads the state in preparing allied health professionals to provide the best, cutting-edge care possible for patients and their families. Our graduates are essential members of health care teams across Arkansas and beyond. I encourage you to join us as a “cutting-edge” partner by investing in innovation and excellence for our students, faculty and staff.

Interprofessional

---

Margaret Bartelt, Ph.D.

“Helping someone who is worthy and needs financial assistance is a win-win for the students, faculty and staff, as well as for me.

As a former professor and interim chair of the Medical Laboratory Sciences program, I taught many students who endured financial hardships to attend college. I watched them persevere and overcome obstacles to achieve their dreams of becoming successful health professionals.

Often, students are not only enrolled in school full time, but they also have families and other financial commitments. It makes me feel good to know that the Student Assistance Fund I started provides emergency assistance to help Medical Laboratory Sciences and Cytotechnology students in their time of need.

Since my retirement, I’ve volunteered in microbiology labs at UAMS. This helps me stay connected with the students, faculty and staff in the College. As a volunteer, I saw an additional opportunity to help faculty and staff grow professionally, so I established a Faculty and Staff Professional Development Fund through a planned gift.

I’m also able to honor the memory of my husband, Gordon Bartelt, through the establishment of these endowments. It’s so rewarding to know that students, faculty and staff will benefit for years to come. I encourage others to give whenever possible.

---

uams.edu/chp
my connections: I am a retired professor and former interim chair of the Medical Laboratory Sciences program. I am a former director of the Clinical Microbiology Laboratory. I volunteer with students in microbiology labs. My primary care physician is at UAMS. My husband was treated at the UAMS Medical Center.
The College of Medicine is home to the state’s most advanced physicians and biomedical researchers, and we’re committed to handing down our expertise to Arkansas’ next generation of doctors and scientists. As federal cutbacks continue, philanthropic support is increasingly vital. Our private funding has doubled in recent years as supporters realize their contributions are wise investments in the future. We’re grateful for your continuing support.

Bill Cravens

Life takes you to unexpected places. In June, appendicitis symptoms took me to the UAMS Emergency Department, where I knew I was in good hands – very good hands. UAMS is Arkansas’ only in-state adult Level I trauma center.

When a life-threatening heart condition developed subsequent to my appendectomy, my appreciation of the expertise of College of Medicine physicians increased. After referral to the College’s cardiovascular specialists, a successful intervention cleared a blockage in my heart.

The compassionate competence of the medical residents, nurses and my entire care team had me starting to feel like my old self again within a couple of days. In fact, just five days after my heart procedure my wife, Mary Lou, and I were off with friends on a previously planned Alaskan cruise.

The care I received at UAMS was phenomenal. I’ve experienced the College of Medicine’s excellence through many connections over three decades. It’s reassuring to know that family and friends around the state benefit from the same high standards. We all benefit greatly from the College’s clinical care, teaching and research missions. My family and I are grateful for the employees, volunteers and benefactors who support UAMS and the College of Medicine.

Debra H. Fiser, M.D.
Dean, College of Medicine
Vice Chancellor, UAMS

Total Gifts
FY 2010 .................. $3.1M
FY 2011 .................. $4.7M
FY 2012 .................. $6.3M

Debra H. Fiser, M.D.

For more information, contact

Debra H. Fiser, M.D.
Dean, College of Medicine
Vice Chancellor, UAMS
my connections: I am a two-term member of the Institute on Aging Advisory Board. I was a founding member of the Cancer Institute Advisory Board. One of my daughters works at the Psychiatric Research Institute. My other daughter serves on the Institute on Aging Advisory Board. My son-in-law is chair of the UAMS Foundation Fund Board. Members of my family have been treated in the E.R.
My connection to UAMS runs deep. I’m committed to my cardiovascular nursing research, my doctoral students, and most importantly, to our college where I’ve served for 18 years. UAMS has enabled me to reach international heights with my research, and I’m committed to health improvement for Arkansas and beyond. My hope is for my students to aspire grandly, working to improve health care for Arkansas and for our nation.

My research findings from three grants funded by the National Institute of Nursing Research about women’s early warning and acute symptoms of heart disease across ethnic groups have received worldwide coverage and garnered international respect for UAMS, for which I am grateful. We are truly impacting women’s lives. Cardiovascular disease is the leading cause of death in Arkansas. Women from varied ethnic groups across the state participate in my national research.

Our college has outstanding faculty who passionately pursue research or implement measures to improve health care. My colleagues are highly committed to our students. Their dedication enables us to graduate the best nursing professionals providing high-quality care at our UAMS hospital, clinics and institutes; Arkansas Children’s Hospital; the Central Arkansas Veterans Healthcare System; and across the state and nation.

Jean McSweeney

my connections: My husband and I use UAMS for our health care needs. My neighbors utilize the physicians and nurses at the Institute on Aging. In my faculty role, I conduct collaborative research with the College of Public Health and the Psychiatric Research Institute.
After earning Doctor of Pharmacy and Master of Public Health degrees at UAMS, I now work in the Evidence-Based Prescription Drug Program in the College of Pharmacy while pursuing a Ph.D. at the UAMS Graduate School, with an emphasis in pharmaceutical evaluation and policy. My long-term goal is to conduct research in pharmacy outcomes, serve as an advocate for pharmacy in the public health arena, and educate the next generation of pharmacists.

Because of my connections to UAMS, I am embarking on a career where I can make meaningful contributions to health care, research and education.
my connections: I knew my grandfather because he had life-saving surgery at UAMS. I received scholarships from UAMS. I graduated from UAMS with Pharm.D. and M.P.H. degrees. I am pursuing a Ph.D. from the Graduate School. I am employed by UAMS.
The Graduate School, perhaps the most exciting academic research training environment in Arkansas, is a focal point for some of the most innovative biomedical research nationally. Our partnership with UAMS colleges and clinical centers at UAMS strengthens our programs in basic, clinical and population-based sciences in creating remarkable opportunity for students. Your gift will allow us to support student scholarships, research and travel to conferences.

When I was 16, my grandfather died of lung cancer. I realized then I wanted to be a doctor, and I was determined to dedicate my life to others. I never intended to go into research or academic medicine. But participating in the summer undergraduate research fellowship program in the Department of Pharmacology changed the course of my life. I worked with Dr. Philip Mayeux on a project that laid the groundwork for what would become my published studies and the cover of Kidney International. I knew I belonged there and returned to work with him three years later.

After working with Dr. Mayeux, I became interested in the kidney. His research integrated cardiovascular, immunological and pharmacological aspects into a single project, and that was intriguing. However, the main reason I chose this work is my connection to Dr. Mayeux. He’s a great scientist and phenomenal mentor. Under his guidance, I received training second to none and I’m confident I’ll be able to overcome any obstacle in my career.

I have been fortunate to be the recipient of multiple scholarships due to my work and path of study. That makes every difference to a student’s ability to focus and achieve greater things.

For more information, contact Art Horne (501) 686-8957 ahorne@uams.edu

gradschool.uams.edu
my connections: My mentor, Dr. Philip Mayeux, established my connection to UAMS. Many friends and classmates also attended medical and graduate school at UAMS. My aunt is a 20+ year survivor of multiple myeloma thanks to her treatment at UAMS.
As one of only 20 comprehensive eye centers nationwide, we provide everything from general eye exams to diagnosis of eye disease to treatment for trauma. We’re one of six ocular and retinal genetics centers in the country. You’ll be impressed with our team’s accomplishments to fight blindness. Your vision and support helps us expand sight-saving research, improve education for students and residents, and recruit more highly skilled practitioners and faculty.

I was terribly nearsighted my whole life. The stereotypical child with heavy, thick glasses, I tried all the latest vision options over the years. After marrying Stephen Kemp, M.D., I sought the best specialists to entrust with my care. That led me to UAMS. I’ve been a patient at the institute for nearly three decades and am amazed by the institute’s growth. I want everyone to know what having a world-class facility providing cutting-edge treatment means for Arkansas.

When I developed cataracts, what Nicola M. Kim, M.D., did with my eyes is more than I ever hoped for. She performed a clear-cornea cataract surgery procedure on both eyes. I now have 20/20 vision for the first time. For me, installing intraocular lenses is a medical miracle.

It’s very important to have an eye exam by an ophthalmologist. Since my husband was diagnosed with diabetes, Dr. Kim monitored his eyes closely. When she found signs of retinopathy, she immediately referred him to Sami Uwaydat, M.D., a retina specialist at the institute, for laser treatment.

Our connection to UAMS will continue as a family affair for all our care. As technology evolves, the UAMS Jones Eye Institute will continue to provide the best care available anywhere.

For more information, contact Shannon Hughen-Giger
(501) 686-8638
shgiger@uams.edu

eye.uams.edu
my connections: I’ve been a patient at UAMS for nearly three decades. My entire family receives care at UAMS; it’s a family affair. My husband has been a pediatric endocrinologist with the UAMS Department of Pediatrics since 1984. I have worked as a writer and also provided the voice for video projects at UAMS.
The Myeloma Institute has one overarching goal: curing multiple myeloma and related diseases. Through innovative research, we have transformed patient care outcomes from dismal to positive and hopeful. We can now confidently say that many patients are even cured. We are proud to be the true hub of excellence for multiple myeloma, thanks in large part to the generosity of our donors.

In 2008 after routine blood work, I was diagnosed with multiple myeloma. I didn’t feel sick. I had a pain in my shoulder and I was a little tired, both of which I attributed to turning 40. Fortunately, I was diagnosed early and had some time to make a decision about where to be treated. I credit going to the Myeloma Institute at UAMS with saving my life. They see more multiple myeloma patients than any other center in the world. They set the standard of care.

My life is 85 percent back to normal. I work, I eat, I drink wine, I play golf, I play my guitar, I do all the things I did before.

At least two newly diagnosed patients email me each week. What do I tell them? Connect with a Myeloma specialist, someone who REALLY knows the disease and if you have to travel to a specialty center, ideally the Myeloma Institute, do it.

I believe multiple myeloma can be cured, and I know the Myeloma Institute has the best chance of making cure a reality.

my connections: My Myeloma Institute doctor is emotionally invested in me. One of the great things in my life is counseling newly diagnosed patients. I love Whole Hog Café - a barbecue place near UAMS - their pulled pork sandwich is the best!
Make your connection.
The Psychiatric Research Institute is committed to improving mental health for individuals and families in Arkansas and beyond through the integration of outstanding education, research, clinical care and service. Your gifts will enable us to fund key research projects and expand and strengthen clinical and community programs.

Allison Harris

“Depression is a disease that ravages and can destroy your life. I know because it’s something I’ve wrestled with for more than twenty years. I also have an inflammatory bowel disease which makes treating depression difficult. Over the years, I’ve tried virtually every kind of anti-depressant medication.

In 2001, I began seeing Dr. Zachary Stowe at Emory University in Atlanta. He moved to UAMS in 2011 to head the Psychiatric Research Institute’s Women’s Mental Health Program. The focus of his program is the treatment of pregnant and postpartum women with mental health issues. While I am not a typical patient and I live in Atlanta, I followed Dr. Stowe to Little Rock.

When I got sick again this winter, Dr. Stowe, his team and other psychiatry faculty evaluated me. Everyone was upbeat and encouraging. The treatment plan prescribed for me was carefully determined based on my individual genetic profile and the incredible resources available at the Psychiatric Research Institute. I was treated effectively with an experimental protocol that is not available in Atlanta.

I now have a strong connection to UAMS and am a huge fan of the knowledgeable and compassionate staff at the Psychiatric Research Institute.”

my connections: My doctor, Zachary Stowe, joined the UAMS team in 2011. I am a huge fan of the knowledgeable and compassionate faculty and staff at PRI.
With one of the highest percentages of older adults, our state embraces the challenge of offering its citizens meaningful, healthy and independent lives. The Reynolds Institute on Aging helps by pursuing aging research, education and clinical care in unique ways not found elsewhere. Your thoughtful gifts allow us to train future generations of teachers, clinicians and scientists to improve care for our beloved senior Arkansans.

Philip Jonsson

"Shortly after celebrating my 80th birthday, I started feeling a little less energetic. Slowing down wasn’t ever part of my lifestyle, but I found myself settling into an all-too-comfortable sedentary existence.

I had noticed some slight changes in my overall health, so I consulted Dr. Jeanne Wei and the other experts working at the Reynolds Institute on Aging. They counseled me on my health practices and outlook and told me that with a few changes in my daily habits, I could possibly live to be 100 or older.

This news renewed my desire to live healthy again and I have since increased my activities, am exercising more, and am eating better. My improved sleep habits have also resulted in a most surprising rejuvenation.

Thanks to the continued multidisciplinary care and support that I am now receiving, the terms “sedentary” or “inactive” no longer describe my lifestyle. This new-found energy has also lifted my spirits, and my wife, Diane, and I are truly enjoying life to the fullest.

I am most proud and grateful to be connected with UAMS, and I am keeping my eyes on that century mark."
my connections: I have also received expert care from the Spine and Eye Institutes. I have served on multiple UAMS advisory boards. My wife serves on the Institute on Aging Advisory Board. I am a member of the Chancellor’s Circle and the Society of the Double Helix.
When someone is diagnosed with cancer, they seek hope. Hope for talented doctors. Hope for innovative research. Hope for successful treatment. That is exactly what we provide our patients every day at the UAMS Winthrop P. Rockefeller Cancer Institute. Through research-driven care and clinical trials unavailable elsewhere in Arkansas, we offer the hope, compassion and innovation that patients need to win the battle with cancer.

Paula Rogers

"After finding a lump in my breast during a self-exam, I was diagnosed with Stage 3 breast cancer in April 2008. I found the best team in the world when I arrived at the UAMS Winthrop P. Rockefeller Cancer Institute. After a successful 16-week round of chemotherapy, I was asked to consider becoming the first patient at UAMS to undergo reconstructive surgery at the same time as a mastectomy. After weighing my options, I agreed. I know everyone isn’t eligible to have the two surgeries at once, so I’m grateful I was able to do so. My surgery was performed at the UAMS Medical Center.

For the next three years, I enjoyed good health. Then, in 2011, I felt another unusual lump. Without hesitation I reconnected with my team at UAMS and underwent chemo, surgery and radiation to eliminate the recurrence and once again be declared cancer free.

Staying hopeful and having faith got me through. Since my first diagnosis, I’ve seen my son go to college, and I’ve had a grandson. These are grateful moments.

**my connections:** I am friends with several UAMS employees. I work at UALR, a sister organization in the University of Arkansas System. I have encouraged and assisted several UAMS graduates through my work on the Single Parent Scholarship Fund Board. I am a board member of the University District, which includes UAMS as a partner.
The Jackson T. Stephens Spine & Neurosciences Institute is committed to a multidisciplinary approach to research, education and clinical care devoted to spinal and neurological disorders. Your generous support helps recruit and retain outstanding clinicians. Endowed chairs such as the Ken Duke Chair for Scoliosis and the M. Gazi Yasargil Chair in Neurosurgery, ensure that those top-notch clinicians continue to impact Arkansans of all ages, on a daily basis.

" Diagnosed with a degenerative bone disease when I was 20, I’ve broken more than 30 bones and had 24 surgeries.

A few years ago, I was diagnosed with degenerative cervical spine disease and Ankylosing spondylitis. After cervical spine surgery that left me in extreme pain, I sought treatment at UAMS.

Dr. T. Glenn Pait performed surgery to correct the problem. I appreciate that he is so thorough and explains everything. I loved the other doctors, nurses and staff as well. Two internal medicine doctors even worked to get my blood pressure under control. It had been extremely high for 15 years. It’s been perfect ever since.

I’m recovering and am looking forward to getting back to golf and gardening.

I have such a strong connection to UAMS that I even changed my primary care doctor to Dr. Vancl. I love how he brings students to see patients. Education is important to me and it is nice to see that UAMS takes it seriously.

My husband and I have always been impressed with and supported the University of Arkansas. Now we are equally grateful for another university in the U of A System - our state’s only academic medical center - UAMS.

Art Horne
(501) 686-8957
ahorne@uams.edu

spine.uams.edu
my connections: My niece graduated from the College of Pharmacy. My primary care physician is at UAMS. We are leaving our bodies to UAMS for educational purposes. We love that UAMS is part of the University of Arkansas System. Go Hogs!
Six years ago I heard about an Arkansas senior citizen who couldn’t find a nursing home that would take her because of her obesity. Her sad experience helped focus my research, which has received significant funding and other support from the Translational Research Institute.

In light of the obesity epidemic and aging baby boomers, I am exploring this emerging issue with the goal of developing strategies that will ‘translate’ to improved quality of long-term services for older Arkansans.

With health care costs soaring, it’s good to know that translational research can save taxpayers’ dollars while helping older citizens. In an earlier study, I was able to demonstrate how an innovative community connectors program could improve access to home and community-based, long-term care services, resulting in $2.6 million in Arkansas Medicaid savings over three years. This work even brought an invitation to speak at the National Press Club in Washington, D.C.

We all want the very best for Arkansas’ seniors. Thanks to the support of the Translational Research Institute, UAMS researchers like me have a better shot at making a difference in people’s lives.
my connections: My partner and I have UAMS-based primary care providers. My mother-in-law has been treated at the Institute on Aging. Three of my neighbors work at UAMS. My cousin graduated from the College of Medicine.
UAMS Medical Center is a place where patients come for hope and healing. We provide these — along with a comfortable, comforting environment, and most importantly, we partner with patients and families to create excellence in health care that’s hard to surpass. Your gift to the Medical Center helps provide the best care possible for each individual patient.

Scott Hardin

When our son, Harrison Luther Hardin was born, we were anxious and very worried — he was 14 weeks early. Weighing just over two pounds, we were comforted that he was at UAMS. We spent 93 days in a private room specially equipped for Harrison with a bed for us and 24-hour medical care from the best doctors and nurses around.

Soon after birth, Harrison was diagnosed with a bilateral grade three brain bleed. The doctor came into his room and told us about his condition. The way he looked us in the eye, his demeanor, and how he spent 30 minutes answering our questions made all the difference in the world. We got pretty bad news, but we weren’t as upset because of the way we were told. It was obvious our doctors shared our concerns.

A brain bleed can cause developmental delays in fine and gross motor skills. Harrison began therapy soon after leaving UAMS and today is a very active, healthy 2-year-old.

We’re forever grateful to UAMS for the care they gave our son, and our entire family. We will remain connected to UAMS for our care because we realize how blessed we are to have a world-class facility in our community.
my connections: My cousin is the director of medical records. My wife continues to see Dr. Paul Wendel and nurse Stephanie Wyatt. Harrison’s NICU Drs. Billy Thomas and Kristy Palmer went above and beyond. We consider the amazing NICU staff, especially the nurses, part of our family. We proudly serve on the UAMS NICU Parent Advisory Board.
As a second-year family medicine resident at AHEC South Central in Pine Bluff, Arkansas, I have long had a desire to serve as a family doctor in or near my hometown.

My connection to UAMS began in high school when I enrolled in the M*A*S*H Summer Camp. After college, I applied to UAMS’ College of Medicine and was placed on the alternate list. Undeterred, I signed up for the Rural Practice Program and was accepted to medical school with a rural scholarship.

Participating in a family medicine interest group during medical school kept me focused on a career in rural medicine, and rotating with my personal family physician, Tom Langston, who is also an AHEC graduate, was just icing on the cake. A community hospital was the best place for me to do my residency so I chose the family medicine residency program at AHEC South Central in Pine Bluff, primarily because of their strengths in family and emergency medicine.

I still have two challenging years of training left, but I am already looking ahead to setting up my practice near my hometown with the help of the AHEC Physician Placement Program.

Art Horne
(501) 686-8957
ahorne@uams.edu

ruralhealth.uams.edu
my connections: My family physician was also trained at an AHEC. I attended the AHEC M*A*S*H program as a senior in high school. UAMS Regional Programs opened the door for me to pursue my dream.
Arkansas is faced with a great challenge: training a sufficient number of health care professionals to meet growing demands. To meet this challenge, UAMS Northwest, a regional campus in northwest Arkansas, was established to expand opportunities to train physicians, pharmacists, nurses and other health care professionals in the state. In operation since 2007, we’ve created an exciting period of growth and expansion.

Gareth Eck, M.D.

“I’ve practiced general surgery since 1984, but the students teach me every day. I’ve been here since that first class arrived. Students are trained throughout northwest Arkansas in area hospitals, pharmacies and clinics. More than 300 local medical professionals like myself provide hands-on training to the state’s future doctors, pharmacists, nurses and health care professionals. They’re a joy to work with and they want to learn and are willing to work hard to do it.

The benefits of a campus environment such as ours are tremendous. It’s a more intense learning experience, but it’s enriched because you’re not just holding a retractor. I didn’t get to do a lot of hands-on in medical school. They get to do so much more here.

It’s been rejuvenating to have young people around to work with. It challenges things. Medicine changes over the years, and if you don’t keep current, it’s easy to be in a rut. The students have been extremely beneficial to me and I appreciate the chance to connect with them.

I feel much better about my future with these new doctors coming up and northwest Arkansas has certainly benefited from the medical school coming here.”

For more information, contact
Tim Hudson

twhudson@uams.edu

northwestcampus.uams.edu
my connections: I am a class of 1979 College of Medicine graduate. I’ve been with UAMS Northwest since the first medical students started there. I provide hand-on surgical training to UAMS medical students.
They all believe in a place of hope and discovery … a place where seemingly miraculous happenings abound … a place where lives are touched, strengthened and rejuvenated. Simply put, these 9,160 stakeholders all believe in UAMS so much that they were donors this past year.

They believe in our state’s only academic medical center so much that they are truly invested in our essential mission. With their investment, we can tackle the task of providing high-quality, innovative health care as well as specialty expertise not found elsewhere. Because of their votes of confidence, we are advancing knowledge through research, and are translating those discoveries into improvements in health and health care. With their help, we are preparing our future health care professionals.

Why do they believe? Because they know first-hand the irreplaceable role of our university — their families, friends and neighbors attest to it. They have seen the remarkable outcomes that only an academic medical center of distinction such as UAMS can provide. They believe because many of their lives have been profoundly changed by all that we commit ourselves to every day — the promise of achieving a higher standard of health and healthy living for all.

Surely 9,160 people can’t be wrong. We hope that we have made a most favorable impression by showcasing some of what we do here at UAMS. We also hope the impression we made was strong enough to make you want to join our team.

Can we count on you to be the 9,161st person to give your gift and make your investment? We rely upon the generosity of our friends to equip this Hub of Health as we pursue our unique mission. A mission that is totally and entirely beneficial to you, your family, your friends and your neighbors.

Thank you for caring about Arkansas.

Lance Burchett
Vice Chancellor of Institutional Advancement
Executive Director of the UAMS Foundation Fund
how you can help . . .

We hope you’re impressed by our world-renowned academic health sciences center and now have many reasons to support us. As a philanthropic destination benefiting Arkansas and beyond, we invite your support. You can help UAMS remain at the forefront of medical innovation and education. Be assured that 100 percent of your gift stays in Arkansas and gifts of any size make a difference.

annual gift designations

The power of unrestricted annual support gives UAMS the flexibility to utilize resources when and where they are needed most. By giving to one or more of these areas, you are providing important support for the highest priorities at UAMS.

Fay W. Boozman College of Public Health
Educating a diverse public health workforce and promoting the health of all Arkansans

College of Health Professions
More program and degree offerings than any other allied health school in Arkansas

College of Medicine
Arkansas’ only medical school—and so much more

College of Nursing
The state’s only Ph.D. in Nursing and only master’s (M.N.Sc.) in Family Psychiatric/Mental Health Nurse Practitioner Program

College of Pharmacy
From drug discovery to advancing medication therapy, we’re developing future pharmacy leaders

Graduate School
Moving innovative discoveries and treatment to patients and communities to improve health

Harvey & Bernice Jones Eye Institute
Providing the most specialized training, research and care of the eye

Myeloma Institute for Research and Therapy
Internationally recognized for outstanding patient outcomes and innovative translational research

Psychiatric Research Institute
The state’s only comprehensive academic, research and behavioral health treatment provider

Donald W. Reynolds Institute on Aging
Translating world-class, aging-related research and education to benefit seniors in Arkansas

Winthrop P. Rockefeller Cancer Institute
Offering hope through a full spectrum of cancer research and treatment services

Jackson T. Stephens Spine & Neurosciences Institute
Innovative spine care using the EVE system to reduce pain and increase function

Translational Research Institute
One of only 60 specialized institutes nationwide accelerating discoveries toward better health

UAMS Medical Center
As patient and family partners, our medical skills are surpassed only by our people skills

UAMS Regional Programs
The state’s premier provider of community-based health professions education

UAMS Northwest
The only UAMS regional campus for health care education

annual giving societies

Supporting UAMS is a way to express pride and appreciation. Please consider joining one of our Annual Giving Societies listed below.
